CONTENTS

	Page.
The Median Ranks of Sample Values in Their Population with an Application to Certain Fatique Studies — Leonard G. Johnson	1
Applications of Elementary Mathematics to Problems in Magnetism — Samuel R. Williams	10
High-Efficiency Cantilever Springs — Douglas G. Anderson	21
An Application of Liebman's Iteration Method to Viscous Flow — Leonard S. Lustick	28
Performance of Centrifugal Pumps from Affinity Laws at Non-Corresponding Operating Points — Arvid E. Roach and Howard H. Kehrl	32
Analytical Derivation of Gear Tooth "X" Factor — Douglas Hughson	39
Surface Stress and Strain of Spiral Involute Gears — Victor E. Francis	42
A General Steady-State Solution of the Two-Mass Torsion Problem — Earl F. Riopelle	54
Transient Motions in Linear Systems — J. Ormondroyd	64
Some Computing Problems in the Automotive Industry — Paul T. Nims	75
A Survey of Industrial Subsidy of the Study of Applied Mathematics — Thomas H. Southard	80
Thermal Design of Evaporative Condensers — Hugh J. Scullen	82
